

Python Exercise 9 & 10 Report

Siyuan Peng

January 20, 2021

Nice work in Section 3.1.

For General Practice 1, I would suggest the following way:

```
new_list = a + b
output_list = list()
for item in new_list:
    if item not in output_list:
        output_list.append(item)
print(output_list)
```

For General Practice 2, you did everything correct.

For General Practice 3, I will work through this in next class.
