

Python Exercise 2 Report

Siyuan Peng

January 13, 2021

Overall satisfactory!

For 3.2.1, remember that the operation `+` between two strings is called string concatenation.

For 3.3.2, `math.pi` and `math.e` are not functions. They are two constants that belong to the `math` package.

For 3.3.5, a smooth way to write this could be `10 + random.random() * 5`.

For 3.3.6, remember that `a` and `b` are included within the range.
