

Project 1 Report

Siyuan Peng

January 19, 2021

Overall, your project 1 looks great! Few comments to give:

1. `speed()` only takes in one positional argument from 0 to 10. `speed(1)` means the slowest, `speed(10)` means the fastest, while `speed(0)` means no animation (the real fastest).
2. `shapeD()` function could be improved. You are required to call the `shapeC` function multiple times with different parameters within the `shapeD()` function itself.
3. Nice extension! Both n-gon and clown are creative!
4. Well-documented report! Oliver loves this kind of report particularly. The word count could be reduced a little bit though.

I would give this project 1: $20 + 5 + 3 = 28$.
